LinguaFlame AI ENGLISH COACH

PRODUCT · 2026

English that people don't quit.

An AI coach inside Telegram: it measures your level, builds a daily practice loop and brings you back at the right moment.

- 6 CEFR levels
- 8 learning flows
- 253 automated tests

PRESENTED BY **Javokhir Kavulzhanov** github.com/aresdev09

Working product · Python 3.12 / aiogram 3 · deployed for **$0**

01 / PROBLEM

Motivation ends before progress does.

Why adults quit English
even when they "understand most of it"

01

No idea where the gap is

People guess their own level: it is unclear whether to fix grammar, vocabulary or fluency.

02

No daily loop

Long lessons and heavy apps do not fit into a working day. Motivation dies before results show up.

03

Feedback arrives too late

Essays and speaking are checked days later, so the same mistake repeats and confidence stays flat.

INSIGHT

People do not need one more course. They need a short loop: DIAGNOSE → ACT → GET FEEDBACK → COME BACK TOMORROW.

→ LinguaFlame

"An adult learner needs less content, less friction — not more."

5–15 minutes | instant feedback | one interface

02 / SOLUTION

One bot. Four steps. Every single day.

LinguaFlame lives inside Telegram — no install, no new account

01 / 04

Diagnose

50 grammar and vocabulary questions. A1–C2 level that accounts for difficulty and answer speed.

an honest starting point

02 / 04

Practise

Vocabulary, grammar, quizzes, essays and free chat — inside one Telegram chat.

5–15 minutes a day

03 / 04

Get feedback

AI explains mistakes, grades essays against IELTS criteria and gently corrects speech.

right away, not next week

04 / 04

Build a habit

Streaks, reminders and a "5 words" button pull the learner back without guilt.

a loop, not a one-off lesson

One interface instead of five services: level test, lesson, essay review, conversation and progress — all in a chat.

Morning · 5 words
a quick start with no homework

Daytime · lesson
explanation and practice, step by step

Evening · essay
IELTS feedback while the text is still fresh

Three screens that show the whole idea.

Not "AI magic" but a clear path:
see your level → do the work → get feedback

CEFR placement

50 questions · 6 levels · weight + speed

Step-by-step lesson

explanation → examples → exercises → mini-test

IELTS essay

overall band · 4 criteria · error breakdown

Interface mock-ups based on real bot flows

04 / PRODUCT

8 flows cover the entire learning path.

From the very first /start to stats and coming back after a missed day

/level_detector

Level detection

50 questions, A1–C2, weighted score plus a speed bonus.

CORE

/daily_grammar

Grammar lesson

Explanation, examples, exercises and a mini-test at the end.

AI

/daily_vocabulary

20 words a day

Transcription and translation, no repeats within 7 days.

AI

/quiz

A/B/C quiz

One question at a time, instant feedback and a final score.

CORE

/essay_checker

Essay review

IELTS Task 2: band score, 4 criteria and weak spots.

AI

/free_chat

Free conversation

Talk in any language; English mistakes are corrected gently.

AI

/stats

Streak and records

Current streak, personal best and 7-day activity.

HABIT

/start

Onboarding

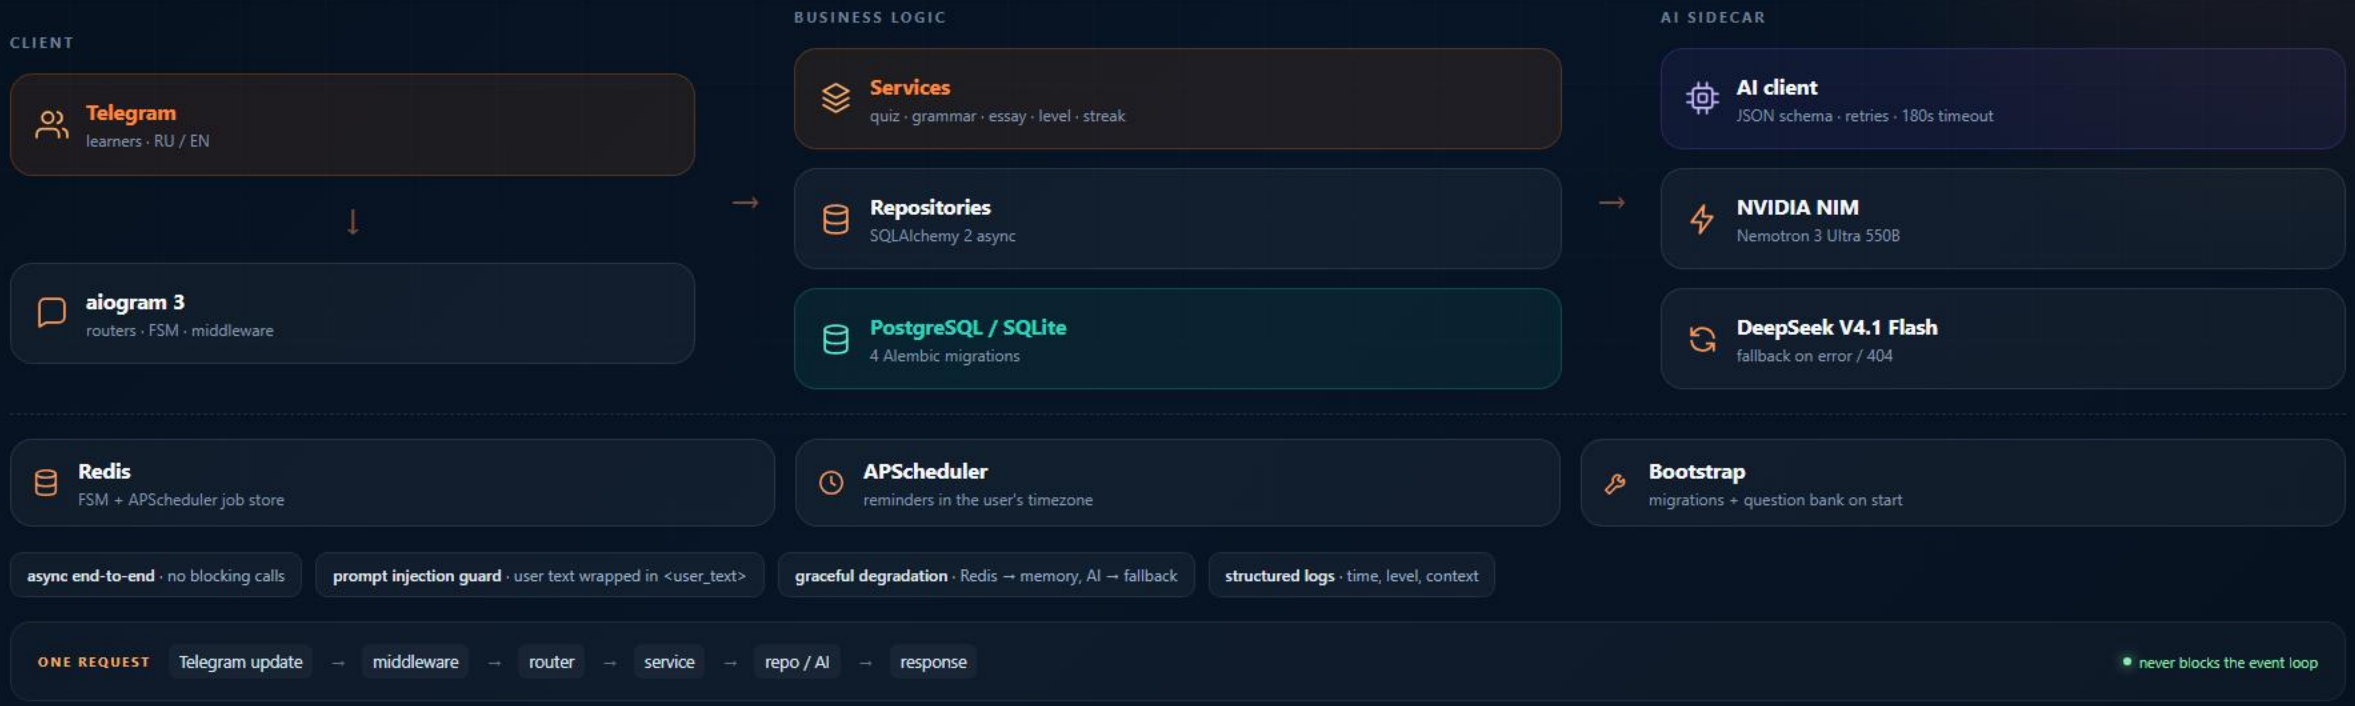

Interface language, timezone and learner profile.

CORE

AI where it earns its place: lessons, essays, vocabulary and live conversation — not decoration.

An async core that survives a single failure.

Telegram → services → data + AI, each layer isolated and testable

Redis
FSM + APScheduler job store

APScheduler
reminders in the user's timezone

Bootstrap
migrations + question bank on start

async end-to-end · no blocking calls

prompt injection guard · user text wrapped in <user_text>

graceful degradation · Redis → memory, AI → fallback

structured logs · time, level, context

ONE REQUEST Telegram update → middleware → router → service → repo / AI → response

never blocks the event loop

A level is more than a percentage of correct answers.

Harder questions are worth more.
Speed is a bonus, not the main criterion.

50 questions per test

180 in the bank · 30 per level

4–5 grammar and vocabulary questions per level.

How the score works

maximum 198

```
score = weight(level) × (1 + 0.10)
the bonus needs a fast and correct answer
```

1	2	3	4	5	6
A1	A2	B1	B2	C1	C2

Final score thresholds

CEFR

A1	A2	B1	B2	C1	C2
0%	15%	30%	50%	70%	88%

+10% for speed
B1+ under 2 s counts as guessing; over 60 s gets no bonus.

Consistency check
60%+ at a higher level can lift the result. It only moves up.

50 questions

198 max score

60% consistency threshold

The level changes only after the test is finished. An unfinished test can be resumed from the same question.

07 / RETENTION

Habit is a feature, same as the lesson.

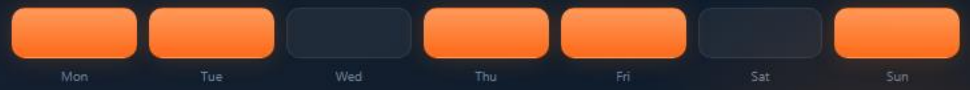

The goal is not a perfect lesson, but the next action

YOUR PROGRESS

12 days

current streak — mechanics example

18	5
personal best	actions this week

09:00 **Morning start**
If nothing happened yet today — a short nudge with a "5 words" button.

20:00 **Evening streak**
Shows the current streak and leaves one easy step before midnight.

missed **"Where are you?"**
A gentle return after a missed day, without wiping out the sense of progress.

3 / 7 days **Longer return**
A few extra reminders, then silence — no spam, no pressure.

At most 2 messages a day. Reminders bring people back instead of becoming spam.

Any of these counts as activity: quiz · lesson · vocabulary · essay · free chat · level test

+1 day of streak

A product you can actually verify.

Not "trust me": tests, linting, migrations and a live AI request

253
automated tests · 1 opt-in live

74
%
code coverage

180
questions in the bank

6
CEFR levels

```
$ pytest -q
253 passed, 1 skipped in 21.35s

$ ruff check .
All checks passed!

$ ruff format --check .
106 files already formatted

# the live NVIDIA API is covered by a separate opt-in test
# the fallback model kicked in after a 404
```

Live AI checked
A real request to NVIDIA NIM, not only mocks.

Fallback on 404
The learner never sees the primary provider fail.

JSON + retry
Validated schemas, retries and a 180 s timeout.

Secrets in env
Tokens and API keys never reach the repository.

Tests over faith
253 checks on every commit

Schemas over parsing
the AI answers with validated JSON

Fallback over 500
a model outage never breaks a lesson

Migrations over manual edits
the schema is reproducible from scratch

09 / SUMMARY

Thank you. Let's make English a daily habit.

LinguaFlame is not a slide concept: it is a working Telegram product with AI, a database, reminders and tests. Anyone can open it and walk the learner's path right now.

- ✓ Product thinking
- ✓ Full-stack async
- ✓ AI reliability
- ✓ Shipping
